beingpawanprasad@outlook.com

Skills

- **Programming Languages** : Python, HTML, CSS, Javascript, Go
- **Libraries and Frameworks** : Django, Fast API, Python Libraries
- **Tools** : MongoDB, MySQL, PostgreSQL, Git, SQL, No SQL, GitHub, Linux/Unix, postman, Grafana, GitHub Actions, Datadog, AWS

Experience

Software Engineer

Nov 2025 - Present

Recro (Client: Allen Digital)

- Automated exam state transition workflows and debugged test IDs stuck in various states, reducing manual intervention and improving exam delivery reliability for students.
- Managed multi-database infrastructure including MongoDB (EC2 and Atlas), ClickHouse for analytics, and S3 for storage, performing real-time data updates and optimizations to support exam operations.
- Developed and maintained observability dashboards using Grafana and Superset to monitor exam state transitions, system performance metrics, and operational health across the testing platform.
- Engineered exam creation pipeline by converting question paper PDFs to HTML content, importing paper codes, and managing question bank queries with subject-specific question ID mapping.
- Implemented logging and monitoring solutions using Groundcover for debugging production issues, enabling faster resolution of student-facing problems and system bottlenecks.
- Provided technical support for student-end issues during live exams, ensuring minimal disruption to the examination process through rapid troubleshooting and data corrections.

Software Developer Engineer

Nov 2024 - Nov 2025

MountBlue Technologies Pvt. Ltd.

- Acquired hand-on experience with Python, JavaScript, Django, REST APIs, CLI tools, Git, HTML and CSS while contributing to various projects throughout the development cycle.
- Enhanced PostgreSQL database schemas for the storage and retrieval of document metadata, implementing indexing strategies that boosted query performance by 40% and facilitated efficient data archiving to meet compliance requirements.
- Developed and tested web applications, APIs and automation scripts using Django and FastAPI, refining both backend and frontend development skills while establishing CI/CD pipelines with GitHub Actions.
- Developed 'Rex', a Python-based Playwright automation agent to streamline client document ordering from multiple external portals (Community Archives, Homewise, Ciranet), eliminating repetitive manual processes and reducing processing time by 65%.
- Designed and implemented an "Ambiguity Process" module within Rex for managing document states and handling end-to-end workflows for specific addresses, automatically retrieving all necessary documents along with their delivery dates and pricing information.
- Built "Agent AutoTag", an LLM-powered agent with MySQL backend that auto-tags the client-uploaded files based on pre-defined prompts, keywords and definitions, significantly reducing

manual classification efforts by 94%.
- Integrated OCR outputs with AutoTag using MySQL databases for unstructured data storage, enabling automated background tagging of hundreds of documents through Celery, minimizing human intervention and enhancing processing metrics and system health across AI-driven workflows.
- Tested and validated RESTful API endpoints using Postman, creating comprehensive through test collections for 'Rex' and 'AutoTag' services, which reduced API-related bugs by 30% and ensured robust error handling across all endpoints.

Projects

Trello Clone Application

https://trello-clone-ppp.netlify.app/

- Created a fully functional Trello clone that supports complete CRUD operations for boards, lists, cards, and checklists.
- Designed a modular JavaScript architecture featuring specialized modules that incorporate dynamic state management, event delegation, and efficient DOM manipulation without reliance on frameworks. This improved code maintainability by 60% and decreased bug resolution time by 35%.
- Developed a responsive user interface utilizing CSS Grid and Flexbox, with component-based styling across five dedicated stylesheets. Achieved 95% cross-browser compatibility and reduced initial load time by 30% through optimized DOM manipulation.
- Implemented comprehensive development practices that include Git version control and optimized API calls with rate limiting compliance, resulting in a 45% reduction in API request overhead and enabling seamless feature scalability with 50% faster integration cycles.
- **Tech Stack**: HTML5, CSS3, Vanilla JavaScript, Trello REST API.

IMDB Clone

https://imdb-clone-ppp.onrender.com

- Created a comprehensive full-stack IMDB clone using Django and PostgreSQL, seamlessly integrating the TMDB API to retrieve and showcase real-time trending movies in a responsive grid layout designed with Tailwind CSS. This initiative enhanced user-engagement by 20% and boosted retention by 15%.
- Introduced sophisticated filtering options featuring genre-based movie categorization and pagination for large datasets. This improvement facilitated personalized content navigation, leading to a 25% increase in user-satisfaction and a 40% reduction in page-load times.
- Developed a mobile-first, responsive UI architecture utilizing Tailwind CSS utility classes, which ensured optimal performance and a smooth browsing experience across all devices. This effort resulted in a 98% mobile responsiveness score and a 30% improvement in rendering speed.
- Designed an efficient backend architecture leveraging Django ORM and a PostgreSQL database. By creating a normalized schema with indexed queries for movie data and optimized the query performance by 50%.
- **Tech Stack**: Django, Python, PostgreSQL, HTML5, Tailwind CSS, JavaScript, TMDB API.

To-Do List App

https://to-do-list-ppp.netlify.app/

- Developed an interactive task management application with complete CRUD functionality using vanilla JavaScript. This includes a custom drag-and-drop task reordering feature with a

visual feedback system, resulting in a 35% increase in task completion rates and a 45% boost in user workflow efficiency.
- Integrated persistent data storage via the localStorage API for task retention across sessions, ensuring cross-browser compatibility. This approach achieved 100% data persistence during sessions and eliminated task loss incidents in user testing.
- Created a responsive user interface utilizing modern CSS architecture, complete with gradient backgrounds, smooth transitions, and custom icon integration. This design led to a 40% increase in user satisfaction scores and a 25% reduction in task creation time through intuitive UI patterns.
- Designed an event-driven architecture with optimized event listeners for real-time DOM manipulation, alongside a modular code structure that separates concerns. This enhancement improved application performance by 50% and enabled feature development cycles to be three times faster.
- **Tech Stack**: HTML5, CSS3, JavaScript, localStorage API.

Kanban Board App

https://pawanprasadpadhy.github.io/Kanban-Board-App/

- Implemented task creation and management functionality, enabling users to create, edit, and delete tasks with unique IDs, streamlining task organization.
- Enhanced task prioritization by implementing color-coded priority levels, improving task organization and user efficiency.
- Optimized task persistence by integrating local storage, ensuring data retention across sessions for a seamless user experience.
- **Tech Stack**: HTML, CSS, JavaScript.

Achievements

- Sustained an unbroken coding streak for over 765 days at Scaler, demonstrating consistent commitment and dedication to advancing programming skills.

Education

Scaler 2024

Specialized in Software Development & Problem Solving

- Specialized in Software Development & Problem Solving.
- **Coursework**: Python Programming, Data Structures & Algorithm, SQL, Full Stack Development.

National Institute Of Science And Technology, Odisha 2019

BTech

- **Branch:** Civil Engineering
